

AMENDMENT UNDER 37 C.F.R. § 1.111  
U.S. Appln. No. 09/826,308  
Attorney Docket No.: Q63977

**AMENDMENTS TO THE SPECIFICATION**

**Please replace the second full paragraph on page 9 with the following amended paragraph:**

Next, an outline of a structure and process of the first embodiment will be described with reference to a block diagram shown in FIG. 1. In the drawing, a spooler 41 and a print processor 42 are software modules constructing the printing system 40. The spooler 41 stores data, which are transmitted from a printer drive 31 and received by the printing system 40, in the external storing device 14. The print processor 42 reads the stored printing data to transmit to the printer 20. The print processor 42 is usually provided as a part of an operating system, but it is also possible to develop and use a print processor having unique specifications.

**Please replace the third full paragraph on page 20 with the following amended paragraph:**

FIG. 7A is a schematic diagram illustrating the above process. In this drawing, 110a, 110b and 110c denote page-files. It is assumed that these are printed for three sets by decollating. Reference number 112 denotes data to be transmitted to the printer 20. The print processor 92 transmits three sets of page-file 110a of the printing start page P1 to the printer 20 so as to delete F1P1 page-file 110a. Then, the same process is performed for the P2 page-file 110b and P3 page-file 110c to end printing.
